KITCHEN COLORING

PROJECT ENERGY

It's important to save energy in every area we can –including the kitchen! Color the scene below and read the energy-saving tips. When you are done, share the tips with your family.

Lights On, Lights Off

A great way to save energy is turning the lights off when you leave a room.

Energy Vampires

Some appliances and electronics, like phone chargers, gaming consoles and laptops, consume electricity even when they're turned off or in "standby mode". Unplug them, or use a power strip to turn them off!

Open Fridge Mysteries

Did you know that keeping the fridge door open for too long wastes electricity?

Leaky Faucets

Over time, a dripping faucet wastes a lot of water – and therefore, energy.

Dish Washing Waste

Only do full loads of dishes – you can wash them by hand to save energy, too.
