Next STEPS

Lots of people use STEM every day in their jobs – maybe even someone you know! The best way to learn about careers is by talking to the people who are already working in those fields. Interview someone in your family or community who uses STEM in their job. Record their answers below.

1. What problems do they solve?

2. How do they use science, technology, engineering, and math in their career?

3. How do they use creativity, collaboration or critical thinking?

4. How did they end up in their current job? Was it always what they planned to do?

5. What advice do they have for you?
